

VERIWHIRL WASHING UNIT

THE WHIP MIX VERIWHIRL IS HERE!

The new VeriWHIRL resin cleaning station is the ideal piece of equipment to use in the 3D printed resin post processing process.

Its oscillating, multi-speed stirrer produces a tornado-like vortex every 60-seconds which guarantees efficient, effective and powerful cleaning within 3 minutes — whether the printed units are individual or still attached to the build plate.

Whip Mix VeriWHIRL
Item #79250

• The VeriWHIRL cleaning station features two baths:

- The two alcohol baths make an effective step-wash system. It cleans more efficiently and less alcohol is needed since the alcohol is used for both a fresh bath and then re-used as a dirty bath.

• The VeriWHIRL's intelligent design offers features such as:

- Mode, Time and Start/Stop buttons
- A mesh basket used in the wash container makes it easy to keep track of small printed parts when cleaning.
- The affordable unit's one-year warranty ensures peace-of-mind for the owner.
